

LAB TESTED AND PROVEN TO REDUCE CORONAVIRUS OVER 99.92% IN 30 MINUTES

OUR BIPOLAR IONISATION UNITS CONTINUOUSLY
STERILIZE AND DISINFECT THE AIR THAT YOU BREATHE.

Feel safe at work or home again... breathe fresh, clean and
pathogen free "Swiss Mountain-Top Pure" indoor air again.

Covid-19 and other viruses are spread through aerosol droplets floating in the air that we inhale. AtmosAir Bi-Polar Ionisation (BPI) continuously saturates the indoor air with powerful + and - charged Oxygen ions in the space at the level where you actually breathe. The bipolar ions continuously decontaminate and disinfect that space.

Our Portable 1 KG AirPro-1

- Can disinfect the indoor air in a space up to 50 M2
- Removes Viruses (including Covid-19), Germs, Bacteria, Allergens, Odours
- Quickly removes O d o u r s , M o u l d , Particulates up to PM0.3

ACTIVELY AND CONTINUOUSLY DISINFECTING AND DECONTAMINATING THE AIR YOU BREATHE

AtmosAir Solutions with over 7,500 installations worldwide is the leading manufacturer of air purification systems using Bi-Polar ionization. AtmosAir's patented bipolar ionization technology has been rigorously tested and scientifically proven to be among the most effective solutions for comprehensive air purification of indoor environments.

Pathogens, especially COVID-19, are spread by tiny aerosol particles suspended in the air typically at your breathing level. They are not sucked back into the AHU filtration system or into passive HEPA filters or killed by UV Lighting inside the ducts. Only AtmosAir actively destroys them in air in the space where you actually breathe and on the surfaces that you touch within that space.

The Result - AtmosAir quickly removes dangerous inhalable particles containing Viruses and Pathogens to once again create a healthy, decontaminated indoor environment where people can live, work, play and dine without fear, and do it quickly, efficiently and cost effectively. At the same time, our bipolar ionization neutralizes odours, VOC's, Mould, Mildew, dust, haze, smoke and particles as tiny as PM0.3.
